

Daniel Dela Dzikunu

Medical Student • Web Developer • Aspiring Cybersecurity Analyst

Twi • English • Fante • Based in Accra, Ghana

danieladeladzikunu@gmail.com • Accra, Ghana • linkedin.com/in/dfour • github.com/dfourmarvel • danieladeladzikunu.vercel.app

PROFESSIONAL SUMMARY

Detail-oriented medical student and multilingual contributor with native-level Twi fluency, conversational Fante, and strong English proficiency. Experienced in transcribing Twi-language content and building culturally aware digital educational tools for Ghanaian audiences. Brings a clinical investigative mindset to data annotation, prompt evaluation, and quality assurance tasks. Proficient in AI-assisted development workflows (agentic AI, Groq API) and comfortable with diverse digital platforms. Combines medical domain expertise with hands-on skills in content analysis, log investigation, and cryptographic verification.

LANGUAGES

Twi	Fluent (spoken & listening); Intermediate (reading & writing)
English	Fluent (professional & academic)
Fante	Conversational
French	Intermediate (medical school coursework)
Japanese	Beginner

EDUCATION

Entrance University of Health Sciences2026 – Present

Bachelor of Medicine and Surgery (MBChB) | Year 1 | Accra, Ghana

Google Cybersecurity Certificate2026 – Present (In Progress)

Google / Coursera | 5 of 8 courses completed

- Labs completed:** Network packet analysis (Wireshark, tcpdump), AES-256-CBC decryption (OpenSSL), SQL-based security log auditing with JOIN/filtering, malware static analysis, and threat modeling with MITRE ATT&CK / CVE.
- Core skills developed:** Systematic documentation, pattern recognition, data integrity verification, and rigorous attention to detail — all directly transferable to annotation and quality-evaluation workflows.

PROJECTS & EXPERIENCE

BibleTTS Twi Transcript Repair — Published Dataset2026

- Using native Twi fluency, caught a data-integrity defect in a published open-source speech dataset: two vowel characters (ɛ/ɔ) had been silently stripped from Asante Twi transcripts across all ~21,600 files, invisible without language-specific review.
- Rebuilt and published the corrected transcripts as an open dataset on Hugging Face (CC BY-SA 4.0), with original and repaired text side by side for auditability.
- Reported the defect upstream on the source repository's public issue tracker, resolving a report that had gone unanswered since March 2024.

Twi Bible Video Transcription2024 – Present

- Built an AI-assisted transcription workflow to process captioned Twi Bible video readings, converting spoken Twi into structured written text with automated orthographic consistency checks and dialectal nuance handling.
- Reviewed and validated AI-generated transcriptions against source audio to ensure high fidelity, flagging misalignments and refining the pipeline for improved accuracy across Twi-language datasets.

Menstrual Health Awareness Game2026

- Built a culturally sensitive educational game addressing menstrual health stigma in Ghanaian communities, with an interactive question bank requiring precise categorisation of health facts, myths, and culturally contextual scenarios.
- Aligned content with UN Sustainable Development Goals (SDG 3 & SDG 5), reflecting awareness of global frameworks and local applicability.

Bible Quiz Game2026

- Developed an accessible Bible trivia game with read-aloud support, requiring careful curation of question difficulty tiers and topical categories for cross-literacy-level engagement.
- Designed static, no-build architecture ensuring instant accessibility across mobile and desktop devices in low-bandwidth environments.

Medical Specialty Matching Web Application2026 – In Progress

- Architected a full-stack web application incorporating an AI matching layer (Groq API), gaining hands-on experience with LLM prompt design, response evaluation, and iterative refinement.
- Engineered via agentic AI development workflows — orchestrating AI coding agents across system architecture, database design, and iterative debugging.

Malware Analysis & Incident Triage2026

Google Cybersecurity Certificate Labs | Tools: Detect It Easy (DIE), VirusTotal, Wireshark, OpenSSL

- Conducted static analysis on flagged binary executables using DIE and VirusTotal to isolate Indicators of Compromise (IoCs) and evaluate multi-engine reputation scan results.
- Authored a formal incident report documenting triage methodology, static analysis findings, IoC review, and final analyst verdict — demonstrating structured, detail-oriented documentation.

TECHNICAL SKILLS

Languages	Twi, Fante, English, French, Japanese
AI & LLM Tools	Agentic AI workflows, Groq API, LLM prompt iteration, Supabase (PostgreSQL + Auth)
Annotation & Analysis	Data review, SQL querying, log filtering, pattern recognition, quality verification
Web Development	HTML5, CSS3, JavaScript, responsive design
Security & Systems	Linux CLI, Wireshark, tcpdump, hash integrity verification, malware triage, threat modeling
Tools	Git / GitHub, Python, VS Code, Kali Linux, Ubuntu VMs

ADDITIONAL

Interests

Medicine and surgery, ethical hacking, CTF competitions, forex and stock trading, Arduino and electronics
